CONTENTS OF VOL. XV., SECOND SERIES.

JANUARY, 1920

An Extension of the Electron Theory of Metals. II, Thermoelectric and Conductivity Constants. A. E. CASWELL 1
The Measurement of Very Short Time Intervals. PAUL E. KLOPSTEG 12
Isentropic Coefficient of Expansion. SATYENDRA RAY 24
Radiation Produced by Partial Ionization. C. D. CHILD 30
Some Studies of Metals by Means of X-Rays. S. NISHIKAWA and G. ASAHARA 38
A New Method of Determining the Temperature Variation of the Thermal Conductivity of Gases. I. G. H. HENDERSON 46
The Determination of the Radiation Error in the Measurement of Gas Temperatures. II. G. H. HENDERSON 8
Is the Einstein Factor *h* a Constant? FERNANDO SANFORD 67

FEBRUARY, 1920

The Nuclei of Atoms and the New Periodic System. W. D. HARKINS 73
The Bohr Theory and the Approximate Harmonics in the Infra-Red Spectra of Diatomic Gases. EDWIN C. KEMBLE 95
Reflection and Transmission Ultra-Violet Light by Sodium and Potassium. MABEL KATHERINE FREHAFER 110
Proceedings of the American Physical Society 126

Minutes of the One hundredth Meeting; Threshold Phenomena and the Law of Radiation, *Jakob Kunz;* The Ionization Potential of Mercury Vapor as a Function of the Temperature of the Cathode, *T. C. Hebb;* On Ionization by Successive Impact, and its Action in Low Voltage Arcs, *Karl T. Compton;* Radiation and Ionization Produced in Helium by 20 Volt Impacts, *Karl T. Compton;* Ionization Potentials of Argon, Nitrogen, Carbon, Monoxide, Helium, Hydrogen and Mercury and Iodine Vapors, *Clifton G. Found;* Studies with the Ionization Gages, I. Construction and Method of Calibration, *S. Dushman and C. G. Found;* Studies with the Ionization Gage, II. Relation between Ionization Current at Constant Pressure and Number of Electrons per Molecule of Gas, *S. Dushman and C. G. Found;* Charcoal Activation, *H. H. Sheldon;* The Absorption of Air by Charcoal at Reduced Pressures near Liquid Air Temperatures, *Thos. E. Doubt, Harry C. Thompson and H. H. Sheldon;* An Apparent Compression by Adsorption, *W. D. Harkins and D. T. Ewing;* The Electric Field of a Rotating Magnetic Doublet, *W. F. G. Swann;* The Change of Molecular Kinetic Energy into Molecular Potential Energy—The Entropy Principle, *William D. Harkins and L. E. Roberts;* The Spectro-Photoelectric Sensitivity of Thaloside, *W. W. Coblentz;* Duration of the Light Emission from a Radiating Hydrogen Atom, *A. J. Dempster;* Vibrational Frequencies of the Halogen Acid Molecules, *W. F. Colby;* The Nuclei of Atoms and the New Periodic System, *W. D. Harkins;* Symmetrical Subdivision of Anode Glow in Helium Discharge Tubes, *G. M. J. Mackay;* The Construction of Three-element Power Electron Tubes, *Earle M. Terry and C. M. Jansky, Jr.;* Experiments on Osmotic-Electric Electromotive Forces, *A. P. Carman and E. C. Frittz, Jr.;* Neutral Magnetization, *A. W. Smith and H. E. Hammond;* The Rigidity of the Earth, *A. A. Michelson and Henry G. Gale;* Stroboscopic Formulæ used by Poske, by Michelson, and by Reed Rspectively, for Rating Tuning Forks, as Special

363576

Cases of the More General Stroboscopic Equation, *L. E. Dodd;* Note on the Theory of Longitudinal Vibrations in Rods having Internal Losses, *W. G. Cady;* The Measurement of very Short Time Intervals, *Paul E. Klopsteg;* On the Effective Capacity and Resistance of a Condenser for High Frequency Currents, *F. C. Blake;* On the Dielectric Constant of Kerosene and Water for High Frequency Currents, *F. C. Blake and Charles Sheard;* The Viscosity-Temperature Curves of Seven Varieties of Optical Glass, *E. W. Washburn and G. R. Shelton;* The Spectral Distribution of the Radiant Energy of Metals, *Grover R. Greenslade;* The Fine-Structure of the Near Infra-red Absorption Bands of the Gases HCl, HBr, and HF, *H. M. Randall and E. S. Imes;* Possible Standard of Sound,—Study of the Energy of, *Chas. T. Knipp;* Minutes of the One Hundred First Meeting.

MARCH, 1920

The Nature of the Process of the Ionization of Gases by Alpha Rays. R. A. MILLIKAN, V. H. GOTTSCHALK and M. J. KELLY..... 157

The Theory of Receivers for Sound in Water. H. A. WILSON..... 178

Proceedings of the American Physical Society..... 206

Presidential Address; Einstein's Law of Gravitation, *J. S. Ames;* Variation of Transparency to Total Radiation with Temperature of Source, *S. Leroy Brown;* The Dissipation of Heat by Various Surfaces in Still Air, *T. S. Taylor;* The Measurement of the Thermal Expansion of Metals at Ordinary Temperatures, *Charles D. Hodgman;* A Method for Determining the Photographic Absorption of Lenses, *G. W. Moffitt;* Defects in Centered Quadratic Lenses, *Irwin Roman;* The Sinker Method Applied to the Rapid and Accurate Determination of Specific Gravities, *N. W. Cummings;* Amplification of Currents in the Bunsen Flame, *C. W. Heaps;* A New Type of Non-Inductive Resistance, *H. L. Dodge;* Some Laboratory Uses for the Contact Rectifier, *J. C. Jensen;* Difficulties in the Theory of Rain Formation, *W. J. Humphreys;* A Physical Theory of Ocean or Reservoir Temperature Distributions Regarded as Effects of Solar Radiation, Evaporation and the Resulting Convection, *Geo. F. McEwen;* Electromagnetic Induction and Relative Motion, *W. F. G. Swann;* The Influence of Blowing Pressure on Pitch of Organ Pipes, *Arthur C. Lunn;* A Photographic Study of Explosions in Gases, *John B. Dutcher;* A Photographic Study of Sound Pulses Through Crooked and Curved Tubes with Deductions Concerning Telephone Mouthpieces, Phonograph Horns, etc., *Arthur L. Foley;* The Performance of Conical Horns, *G. W. Stewart;* A Photographic Study of the Wave-form of Sounds from Large Guns; *Dayton C. Miller;* The Calibration of a Sound Chamber and Sound Sources and the Measurement of Sound Transmission of Simple Partitions, *Paul E. Sabone;* Transmission of Sound Through Walls, *F. R. Watson;* Charcoal Absorption and Cyclic Changes, *Thos. E. Doubt;* The Heat of Vaporization and Work of Ionization, *C. S. Fazel;* Energy Content of Characteristic Radiations, *Chester W. Rice;* The Spectrum of Radium Emanation, *R. E. Nyswander, S. C. Lind and R. B. Moore;* The Zeeman Effect for Electric Furnace, Spectra, *Arthur S. King;* Critical Potentials of the "L" Series of Platinum, *David L. Webster;* On the Possibility of Pulling Electrons from Metal by Powerful Electric Fields, *R. A. Millikan and B. E. Shackelford;* The Deflection of Alpha Particles Through Large Angles by Light Atoms, *Leonard B. Loeb;* The Construction and Calibration of a Device Permitting the Application of a Current Pulse for a Pre-determined Number of Milliseconds, *Lindley Pyle;* The Influence of Air Velocity and Angle of Incidence on the Dissipation of Heat, *T. S. Taylor;* Reactive Hydrogen in the Electrical Discharge, *Gerald L. Wendt and Robert S. Landauer;* A Photographic Method of Measuring the Instantaneous Velocity of Sound Waves at Points near the Source, *Arthur L. Foley;* An Undamped Wave Method of Determining Dielectric Constants of Liquids, *W. H. Hyslop and A. P. Carman;* A Possible Standard of Sound: I, Study of Operating Conditions; II, Study of Wave Form, *Chas. T. Knipp;* Optical Problems in Classmaking, *H. P.*

Gage; The Functions of Intensity and Phase in the Binaural Location of Pure Tones, *G. W. Stewart.*

APRIL, 1919

On the Irregularities of Motion of the Foucault Pendulum. A. C. LONGDON..... 241
On the Diffraction-Figures due to an Elliptic Aperture. C. V. RAMAN..... 256
Refinements in Spherometry. G. W. MOFFITT..... 261
The Automatic Registration of α particles, β particles and γ ray and X-ray Pulses. ALOIS F. KOVARIK..... 272
Proceedings of the American Physical Society..... 281

Minutes of the Ninety-Sixth Meeting; Thermionic Amplifier, *H. J. Van der Bijl;* Water Vapor Pressure in Units of Force, *Alexander McAdie:* The Thermal Expansion of Living Tree Trunks, *C. C. Trowbridge (deceased) and Mabel Weil;* Pyrometer Absorption Glasses, *Paul D. Foote, C. O. Fairchild and F. L. Mohler;* The Measurement of Small Alternating Currents by Means of a Rayleigh Resonator, *F. R. Watson;* An Addition to the Theory of the Quadrant Electrometer, *A. H. and K. T. Compton;* Permanent-Contact Crystal Detectors, *Louise S. McDowell;* Are the Frequencies in the K Series of X-rays the Highest Frequencies Characteristic of Chemical Elements, *William Duane and Takeo Shimizu;* The Spectral Photo-electric Sensitivity of Silver Sulphide, *W. W. Coblentz and H. Kahler;* The Crystal Structure of Carborundum, *A. W. Hull;* A Possible Relation between the Resonance Potential and Specific Inductive Capacity of a Metallic Vapor and its Properties in the Solid State, *K. T. Compton;* The Law of Absorption of High Frequency Radiation, *Arthur H. Compton;* Collisions of Slow Moving Electrons with Nitrogen Molecules, *S. Karrer;* The Ionizing Potentials of Argon, Neon and Helium, *H. C. Rentschler;* Note on the Use of the Hot Cathode Vacuum Tube for the Measurement of Voltage, *Lynde P. Wheeler;* An Interferential Method for Measuring the Expansion of Very Small Samples, *C. G. Peters and Irwin G. Priest;* The Properties of the Electron as Derived from the Chemical Properties of the Elements, *Irving Langmuir;* Some Physical Properties of Dental Materials, *C. G. Peters and W. H. Souder;* The Origin of the General Radiation Spectrum of X-Rays, *David L. Webster;* Note on Bomb Trajectories, *Edwin B. Wilson;* On the Relation between the K Series and the L Series of X-Rays, *William Duane and Takeo Shimizu;* Temperature Coefficient of Resistance of Molybdenum, *E. C. Blom;* Some Photoelectric Lecture Experiments, *Jacob Kunz;* On the Measurement of the Detection Coefficient of Thermionic Vacuum Tubes, *H. J. Van der Bijl;* A New Formula for the Spectral Distribution of Energy from a Complete Radiator, *Irwin G. Priest;* On the Measurement of the True Barometric Pressure in a Rapidly Moving Current of Air, *J. G. Coffin;* The Function of Phase Difference in the Binaurale Location of Pure Tone, *R. V. L. Hartley.*

MAY, 1920

Magnetization and Hysteresis in Hematite Crystals. T. TOWNSEND SMITH..... 345
Unipolar Induction. W. F. G. SWANN..... 365
The Pressure of Sound. WARREN WEAVER..... 399
The Measurement of Received Radio Currents with the Electrometer. E. O. HULBURT and G. BREIT..... 405
On the Input Impedance of the Thermionic Amplifier. STUART BALLANTINE..... 409
Experiments in Binaural Phase Difference Effect with Pure Tones. MARGERY SIMPSON. 421
The Function of Intensity and Phase in the Binaural Location of Pure Tones. I. G. W. STEWART..... 425
The Function of Intensity and Phase in the Binaural Location of Pure Tones. II. G. W. STEWART..... 432
The Influence of Blowing Pressure on Pitch of Organ Pipes. ARTHUR C. LUNN..... 446
The Skin Effect and Flux Distribution of Conductors in Proximity to Iron Masses. A. PRESS..... 450
Proceedings of American Physical Society..... 454

JUNE, 1920

Physical Properties of Thin Metallic Films. I. Magneto-resistance Effects in Thin Films of Bismuth. J. A. BECKER and L. F. CURTISS 457

Physical Properties of Thin Metallic Films. II. Magneto-Resistance Effects in Fsmil of Bismuth. F. K. RICHTMYER and L. F. CURTISS 465

On Ionization by Successive Impacts, and its Action in Low Voltage Arcs. KARL T. COMPTON 476

The Distribution of Energy about a Point Source. PAUL R. HEYL 487

Cathode Fall in Neon. ARTHUR H. COMPTON and C. C. VAN VOORHIS 492

Note on the Resonance and Ionization Velocities for Electrons in the Monatomic Gases. FRANK HORTON and ANN CATHERINE DAVIES 498

Note on the Forces between Revolving Electrons at a Great Distance. H. A. WILSON .. 503

Proceedings of the American Physical Society 505

Minutes of the One hundred third Meeting; An Astatic Magnetometer of Variable Sensitivity, *C. Nusbaum;* Automatic Apparatus for Intermittent Testing, *George W. Vinal and L. M. Ritchie;* Thermostat Performance, *Walter P. White;* The Use of the Oscillograph for Measuring Short-time Intervals, *H. L. Curtis and R. C. Duncan;* Some Refinements in a Chronograph, *G. F. Hull and E. E. Eckhardt;* The Outward Motion of Air from a Telephone Receiver, *Herbert Grove Dorsey;* The Relative Difficulty of Interpreting the Spoken Sounds of English, *H. Fletcher;* The Whine of a Shell *Arthur Taber Jones;* Photographic Study of a Bullet in Flight and of the Resulting Air Disturbances, *D. C. Miller, F. A. Firestone and Phil. P. Quayle;* Production, Transmission, and Reception of Feeble Earth Vibrations, *E. B. Stephenson;* Dispersion in Optical Glasses, *F. E. Wright;* A Method of Detefrmining the Tensile Strength of Glass, *J. T. Littleton;* The Expansion of Glass at High Temperatures, *W. B. Pietenpol;* The Entropy of Gases and the Principle of Similitude, *Richard C. Tolman;* The Third Law of Thermodynamics, *Gilbert N. Lewis and G. E. Gibson;* A More General Form of the Maxwell Distribution Law, *Gilbert N. Lewis and G. E. Gibson;* Volume Changes Accompanying the Transition of a Dental Amalgam near 70° C., *Arthur W. Gray;* Results of Atmospheric-Electric Observations made during the Solar Eclipse of May 29, 1919, *S. J. Mauchly and Andrew Thomson;* Effects of Differential Refraction in the Earth's Atmosphere upon Observed Light Deflections, *L. A. Bauer and W. J. Peters;* Note on Electromagnetic Induction and Relative Motion, *S. J. Barnett;* An Integration Method of Deriving Alternating Current. Resistance and Inductance of Conductors, *H. L. Curtis;* The Status of Ohm's Law, *F. Wenner;* The Inductance of Coils Wound on Polygonal Forms, *Frederick W. Grover;* A Modification of the Braun Electrostatic Voltmeter, *J. E. Shrader;* On the Use of Continuous Waves for the Measurement of Dielectric Constants of Liquids, *W. F. Powers and J. C. Hubbard;* An Extension of the Range of the McLeod Gauge, *A. H. Pfund;* The Electric Spark-Modified Method of Control, *W. O. Sawtelle;* Piezelectric and Allied Phenomena in Rochelle Salt, *Joseph Valasek;* The Application of Rotatory Dispersion to Colorimetry, Photometry and Pyrometry, *Irwin G. Priest;* Color Match and Spectral Distribution, *Edward P. Hyde and W. E. Forsythe;* The Cold-Point Palladium-Point Brightness Ratio, *Edward P. Hyde and W. E. Forsythe;* A Note on the Temperature Shift in near Infra-red Bands, *H. M. Randall, W. F. Colby, R. F. Paton;* Transmission by Thin Films in the Extreme Ultra-Violet, *Elizabeth R. Laird;* The Luminescence of Samarium, *Horace L. Howes;* The Existence of Homogeneous Groups of Large Ions, *Oswald Blackwood;* The Resistance of a Gas to the Motion of a Sphere when the Mean Free Path is Large in Comparison with the Diameter of the Sphere, *R. A. Millikan;* Low Voltage Arc in Helium, *K. T. Compton, P. S. Olmstead and Ed. Lilly;* The Crystal Structure of Carborundum, *Albert W. Hull;* On the Absorption of X-rays by Chemical Elements of High Atomic Numbers, *William Duane and R. A. Patterson;* The Mass-Absorption Coefficient of Water, Aluminium, Copper,

and Molybdenum for X-Rays of Short Wave-Length, *F. K. Richmyer and Kerr Grant;* On the Photoelectric Long Wave-Length Limit of Platinum and Silver, *Otto Stuhlman, Jr.;* Photoelectric Effect of Alkali-Vapors and a New Determination of *h*, *E. H. Williams and Jakob Kunz;* Color Sensitiveness of Photoelectric Cells, *Miss E. Frances Seiler;* Measurement of Short Time Intervals in the Corona Discharge, *Charles St. Fazel;* The Detecting Efficiency of the Electron Tube Amplifier, *E. O. Hulburt and G. Breit;* The Detecting Efficiency of the Single Electron Tube, *E. O. Hulburt and G. Breit;* The Calculation of Detecting and Amplifying Properties of an Electron Tube from its Static Characteristics, *G. Breit;* The Emission of Electrons from Oxide-Coated Filaments, *C. Davisson and H. A. Pidgeon;* The Ionization and Resonance Potentials of Nitrogen, Oxygen and Hydrogen, *F. L. Mohler and Paul D. Foote;* The Load on the Modulator Tube in Radio Telephone Sets, *E. S. Purington;* Operation of an Electron Tube as an Amplifying Rectifier; *Lewis M. Hull;* Capacitive Coupling in Radio Circuits, *L. E. Whittemore;* An Air Distance Recorder, *Charles H. Colvin, M.E.*

Erratum..... 565
